These technicians repair cars and other vehicles that have body damage or are in need of reconditioning in conjunction with ASE standards. The objective is for students to get the entry-level skills needed to start a lifelong career in the collision repair and auto restoration fields. During their time, the students will specialize in auto detailing, prepping, priming, painting, clear coating, MIG welding, resistance spot welding, and plasma cutting while working with sheet metal.

**Related Job Titles**
- Auto Body Technician
